

Date: September 27, 2013
Bulletin Number: GL13-11PMB
Subject: Combine Auto-Guide System Options
Distribution: All Gleaner® Dealers

Summary

This bulletin is for information purposes only.

In April, AGCO released AG3000, the new solution for automatic guidance. AG3000 replaces System150 Guidance. The primary advantage in combines with this new system is integration in to the C2100 monitor, which means the additional monitor is not required. The AG3000 system was available, factory installed, from Serial Number AGCRS7700DHTV7258 and forward, or May 1, 2013.

- The AG3000 system utilizes the AGI-4 GPS Receiver, this is the smaller, white receiver, often referred to as a TopDoc.
 - The C3000 terminal can be purchased if a separate monitor is desired.
- The System150 utilized the AGI-3 GPS Receiver, which was the larger yellow receiver, or “TopDoc”.

The System150 kit can be used in the newer combines, and the AG3000 kit can be used in combines beginning with the addition of the C2100 monitor. Please see the table below for clarification.

	System 150 , including AGI-3 GPS Receiver and GX-45 monitor	AG3000 , including AGI-4 Receiver	C3000 Terminal with AG3000 System installed
2011 or older	Plug in AGI-3 Receiver, GX-45, and remote antenna if used	AGI 4 will NOT work with C2000 monitor. C2100 monitor can be purchased	Install C3000 Monitor Kit # AGA4483M from Wholegoods, and installation kit 71471780 from Parts.
2012 through March 2013 S7 Series Combine Production	Plug in AGI-3 Receiver, GX-45, and remote antenna if used	Plug in AGI-4 Receiver, and ensure 1.74 software for C2100 is installed	Install C3000 Monitor Kit # AGA4483M from Wholegoods, and installation kit 71471780 from Parts.
April 2013 production and S8 Production	Remove pin 2 of the 6 pin Deutsch Connector at the end of the GX45 monitor cable.	Plug in AGI-4 Receiver, and ensure 1.74 software for C2100 is installed	YES
